

Exercise 1:

Create a form design that will display the odd or even number

The screenshot shows a Windows Form titled "Form1". Inside the form, there is a label "Enter a number:" followed by a text input box. Below the input box is a button labeled "Check". Further down is a label "Result". The form has a standard Windows window border with minimize, maximize, and close buttons in the top right corner.

```
private void button1_Click(object sender, EventArgs e)
{
    int age = Convert.ToInt32(txtNumber.Text);

    if (string.IsNullOrEmpty(txtNumber.Text))
    {
        MessageBox.Show("Please enter a number.");
        return;
    }

    if (int.TryParse(txtNumber.Text, out int number))
    {
        if (number % 2 == 0)
        {
            lblResult.Text = number + " is Even";
            lblResult.ForeColor = System.Drawing.Color.Blue;
        }
        else
        {
            lblResult.Text = number + " is Odd";
            lblResult.ForeColor = System.Drawing.Color.Red;
        }
    }
    else
    {
        MessageBox.Show("Invalid input. Please enter a valid integer.");
        lblResult.Text = "";
    }
}
```

Form1

Enter a number:

2 is Even

Form1

Enter a number:

1 is Odd

Exercise 2:

Create a form design that will display the negative or positive number

```
1 reference
private void btnCheck_Click(object sender, EventArgs e)
{
    if (string.IsNullOrEmpty(txtNumber.Text))
    {
        MessageBox.Show("Please enter a number.");
        return;
    }

    if (double.TryParse(txtNumber.Text, out double number))
    {
        if (number > 0)
        {
            lblResult.Text = number + " is Positive";
            lblResult.ForeColor = System.Drawing.Color.Green;
        }
        else if (number < 0)
        {
            lblResult.Text = number + " is Negative";
            lblResult.ForeColor = System.Drawing.Color.Red;
        }
        else
        {
            lblResult.Text = "Zero (neither positive nor negative)";
            lblResult.ForeColor = System.Drawing.Color.Black;
        }
    }
    else
    {
        MessageBox.Show("Invalid input. Please enter a valid number.");
        lblResult.Text = "";
    }
}
}
```

The screenshot shows a Windows Form titled "Form1". Inside the form, there is a label "Enter a number:" followed by a text input field. Below the input field is a button with the text "check". To the right of the button, the word "Result" is displayed. The form has a standard Windows window border with minimize, maximize, and close buttons in the top right corner.

Form1

Enter a number:

check

-1 is Negative

Enter a number:

check

Zero (neither positive nor negative)

Form1

Enter a number:

check

1 is Positive
